2 Introduction

When I'm doing embedded programming I use my HP-16c & DM16 calculators all the time. The programs here augment the 42's capabilities with every function on the 16c that I use. Functionality beyond the 16c includes comprehensive support for bit fields, better masks, integer square root & logarithms, and more. Finally this software provides a **SHOW**-like function called **BVIEW** is capable of displaying a full 64-bit binary number on a standard 42s display.

Everything is encapsulated into a single program with multiple global labels so that most of the functionality can be called directly from other programs.

The only thing that still bugs me is the annoying way the 42s requires one to enter hexadecimal digits. Not much I can do about that...

3 BASE: BASE-N Application

3.1 Functionality & Menu

Menu:SubMenu:Key	Program	Description
S&R:SLn		Shift Y Left X Bits
S&R:SRn		Shift Y Right X Bits
S&R:RLn		Rotate Y Left by X bits
S&R:RRn		Rotate Y Right by X bits
S&R:□□□□		
S&R:BVIEW		
S&R:LJ		Left Justify Bits.
S&R:RJ		Right Justify Bits
S&R:SHFXY		Shift X by Y Bits (left when Y negative)
S&R:ROTXY		
S&R:□□□□		
S&R:BVIEW		

Continued on next page

Continued from previous page		
Menu:SubMenu:Key	Program	Description
S&R:SL		Shift Left 1 Bit
S&R:SR		Shift Right 1 Bit
S&R:RL		Rotate Left 1 Bit
S&R:RR		Rotate Right 1 Bit
S&R:□□□□		
S&R:BVIEW		
BITS:GETB		Return the Xth bit of Y
BITS:SB	SETB	Set the Xth bit of Y
BITS:CB	CLRB	Clear the Xth bit in Y
BITS:AB	ASNB	Assign X to the Yth bit of Z
BITS:□□□□		
BITS:BVIEW		
BITS:GY@X		Return the Y bits of Z starting at bit X
BITS:SY@X		Set Y bits of Z starting at bit X
BITS:CY@X		Clear Y bits of Z starting at bit X
BITS:AZ@Y		Assign LS Z bits of X to Z bits of T starting at Y
BITS:□□□□		
BITS:BVIEW		
BITS:POPRB		Pop rightmost bits X bits off of Y
BITS:POPLB		Pop leftmost bits X bits off of Y
BITS:□□□□		
BITS:□□□□		
BITS:□□□□		
BITS:BVIEW		
FUN:B#		Count set bits
FUN:MSSB		Position of the Most Significant Set Bit
FUN:LSSB		Position of the Least Significant Set Bit
FUN:ILN2		Integer base 2 log
FUN:ISQRT		Integer square root
FUN:BVIEW		
FUN:REVN		Reverse rightmost X bits of Y
FUN:REVB		Reverse bits of X
FUN:□□□□		
FUN:□□□□		
FUN:□□□□		
FUN:BVIEW		
MASK:MSKL		Create integer with left most X bits set
MASK:MSKR		Create integer with right most X bits set
MASK:MSKn		Create integer with Y set bits located at bit X
MASK:□□□□		
MASK:□□□□		
MASK:BVIEW

LBL 95	BINM	Set current base to binary
□□□□	-	
BMNU	LBL 75	Switch to built in BASE menu
LBL 96	WSIZE	Set WSIZE
LBL 97	BSIGNED	Toggle signed/unsigned mode
LBL 98	BWRAP	Toggle wrapped mode
□□□□	-	
LBL 99	LBL 74	Toggle BVIEW padding
□□□□	-	

3.2 Menu Code

The menu program is generated via the following bit of elisp. You must first define the `MJR-generate-42-menu-code` and `MJR-custom-x-gen` by evaluating the code blocks in the `hp42s-meta.org` file. The skeleton was generated by the following code. That skeleton has been fleshed out with some custom code.
